Re: Intel Significant Permit Revision for Munters Thermal Oxidizers

To Whom It May Concern,

Intel Corporation is submitting the attached permit application for the installation of five (5) additional thermal oxidizers. The purpose of this revision is to have complete emissions control redundancy for the VOC exhaust system from the manufacturing operation. The additional units will have the same operating parameters, including removal efficiency, operating temperature and combustion emissions, as the existing thermal oxidizers. The proposed revision will include the addition of the new units to Table 1, Table CS and Attachment A of the permit. In addition, Intel is submitting ambient air quality modeling to demonstrate that emissions from the site after the modification will not cause or contribute to an exceedance of ambient air quality standards. No change in annual allowable emission rates are proposed for this permit revision.

Intel Corporation will submit the permit filing fee of \$500 as a separate submittal. If you have any comments or questions, please contact Sarah Chavez at 505-794-4917 or Andrew Moen at 505-794-4911.

Sincerely,

A handwritten signature in dark ink, appearing to read "Frank Gallegos", with a long horizontal stroke extending to the right.

Frank Gallegos
